

AUSTRALIAN BUREAU OF STATISTICS

Queensland Office

Catalogue No. 6201.3

12 noon 18 August 1983

THE LABOUR FORCE, QUEENSLAND, MAY 1983

INQUIRIES

Inquiries concerning these statistics may be made by telephoning Brisbane (STD 07) 33 6087, or by writing to Information Services, ABS, Statistics House, 345 Ann Street, Brisbane, Q. 4000.

For copies of this publication please contact the Publications Clerk, Brisbane (STD 07) 33 6352.

Main Features

- In May 1983, the labour force in Queensland was estimated to be 1,086,200 and comprised 690,100 males and 396,100 females, including 237,700 married females.
- Employed persons in May 1983 totalled 973,500. Males numbered 620,000 and females 353,500. Of the females, 219,000 were married.
- The estimated number of persons unemployed in Queensland in May 1983 was 112,700 or 10.4 per cent of the labour force. Of this total, the number of persons looking for part-time work was estimated to be 13,100.
- Of the total unemployed, 25,300 persons, or 22.5 per cent, were in the 15 to 19 years age group. This represents an unemployment rate of 19.3 per cent for this age group.
- The estimated number of persons looking for their first job in May 1983 was 10,600 or 9.4 per cent of all unemployed persons in Queensland.

Explanatory Notes

General

The Population Survey. The survey is based on a multi-stage area sample of private dwellings and non-private dwellings (hotels, motels, etc.) and usually covers slightly more than two-thirds of 1 per cent of the population of Queensland. Commencing with the survey in February 1978 the population surveys have been conducted monthly. Previously the surveys were conducted in February, May, August, and November each year. The information is obtained from the occupants of selected dwellings by carefully-chosen and specially-trained interviewers. The interviews are generally carried out during a period of two weeks beginning on the Monday between the 6th and 12th of each month.

Scope. The survey includes all persons aged 15 years and over except:

- (a) members of the permanent defence forces;
- (b) certain diplomatic personnel of overseas governments, customarily excluded from Census and estimated populations;
- (c) overseas visitors holidaying in Australia; and
- (d) members of non-Australian defence forces (and their dependants) stationed in Australia.

Classification of the Labour Force. The labour force classification used in the surveys conforms closely to that recommended by the Eighth International Conference of Labour Statisticians, 1954. The labour force category to which a person is assigned depends on his actual

activity (i.e. whether working, looking for work, etc.) during a specified week, known as survey week, which is the week immediately preceding that in which the interview takes place. The principal categories of the labour force appearing in tables in this bulletin are defined as follows:

The Labour Force comprises all persons aged 15 years and over who, during the survey week, were employed or unemployed.

(1) Employed persons

(a) comprise all those aged 15 years and over who, during the survey week:

(i) worked for one hour or more for pay, profit, commission, or payment in kind in a job or business, or on a farm (including employees, employers, and self-employed persons); or

(ii) worked 15 hours or more without pay in family business or on a farm (i.e. unpaid family helpers); or

(iii) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the survey week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the survey week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or

(iv) were employers or self-employed persons who had a job, business, or farm, but were not at work.

(b) can be classified into:

(i) full-time workers, i.e. those who usually work 35 hours or more a week and others who, although usually part-time workers, worked 35 hours or more during the survey week; and

(ii) part-time workers, i.e. those who usually work less than 35 hours a week and who did so during the survey week. When recording hours of work, fractions of an hour are disregarded.

(2) Unemployed persons are those aged 15 years and over who were not employed during the survey week, and:

(a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the survey week and:

(i) were available for work in the survey week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the survey week); or

(ii) were waiting to start a new job within four weeks from the end of the survey week and would have started in the survey week if the job had been available then; or

(b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the survey week (including the whole of the survey week) for reasons other than bad weather or plant breakdown.

Persons Not in the Labour Force are those who, during the survey week, were not in the categories employed or unem-

played as defined. This category therefore includes persons who were keeping house (unpaid), attending an educational institution (e.g. school or university), retired or voluntarily inactive, permanently unable to work, inmates of institutions, trainee teachers, members of contemplative religious orders, and persons whose only activity during the survey week was jury service or unpaid voluntary work for a charitable organisation, provided they had not actively looked for work in the four weeks up to the end of the survey week, and

(a) in the survey week:

(i) were without a job, business, or farm; or

(ii) had worked for less than one hour for pay, profit, commission, or payment in kind; or

(iii) had worked for less than 15 hours without pay in a family business or farm; or

(b) had been stood down without pay for four weeks or more up to the end of the survey week.

Industry Classification. Industry is classified according to the Australian Standard Industrial Classification.

Occupation Classification. Occupation has been classified according to the Classification and Classified List of Occupations, revised June 1976.

The Brisbane Statistical Division comprises the Cities of Brisbane, Ipswich, Redcliffe, and Logan, the Shire of Redland, and parts of the Shires of Albert, Beaudesert, Caboolture, Moreton, and Pine Rivers.

Technical Notes

Estimation Procedure. The estimates are derived from the monthly population survey by use of a complex ratio estimation procedure, which ensures that the survey estimates conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself.

Reliability of the Estimates. Since the estimates in this bulletin are based on information obtained from occupants of a sample of dwellings they may differ from the figures that would have been obtained if all dwellings had been included in the surveys. One measure of the likely difference is given by the standard error which indicates the extent to which an estimate might have varied by chance. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included and about 19 chances in 20 that the difference will be less than two standard errors. Space does not allow for the separate indication of the standard errors of all estimates in this bulletin. Standard errors for general application are given in Table A following. These figures will not give a precise measure of the standard error of a particular estimate since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics. They will provide an indication, however, of the magnitude of the standard error of any particular estimate for any particular survey. An example of the use of Table A is as follows: If the estimate for Queensland obtained from

the sample is 20,000 the standard error is 1,500, i.e. there are about two chances in three that the true figure is within the range 18,500 to 21,500 and about 19 chances in 20 that the true figure is between 17,000 and 23,000.

The standard errors of estimates relating to agricultural employment are generally somewhat higher than the standard errors of other estimates of the same magnitude. Estimates for females also tend to have higher standard errors than estimates of equivalent size for males in similar employment categories.

The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends upon both the size of the numerator and the size of the denominator. The per cent standard error of the estimated percentage, however, will generally be lower than the per cent standard error of the estimate of the numerator. The per cent standard errors of the numerators can be obtained from Table A.

As the standard errors in Table A show, the smaller the estimate the higher is the relative standard error. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this bulletin, estimates below the level shown in Table A (3,500) have not been included. Although figures for these small components can in some cases be derived by subtraction, they should not be regarded as reliable.

Table A

Size of estimate	Standard errors	Per cent of estimate
persons	No.	%
(a) 3,500	740	21.1
4,000	780	19.5
4,500	820	18.2
5,000	860	17.2
6,000	930	15.5
10,000	1,200	12.0
20,000	1,500	7.5
50,000	2,200	4.4
100,000	2,800	2.8
200,000	3,600	1.8
300,000	4,100	1.4
500,000	4,800	1.0
1,000,000	5,900	0.6

(a) Estimates below 3,500 have not been published (see text above).

The movement in the level of an estimate is also subject to sampling variability. The standard error of the movement depends on the levels of the estimates from

which the movement is obtained rather than the size of the movement.

An indication of the magnitude of standard errors of monthly movements in the Queensland estimates is given in Table B. The estimates of standard errors of monthly movements apply only to estimates of movements between two consecutive months. Movements between corresponding months of consecutive years or between two other non-consecutive months will generally be subject to somewhat greater sampling variability than is indicated in Table B. A guide to the standard errors of quarterly movements since February 1978 can be obtained by multiplying the corresponding figure for monthly movements by 1.4.

Table B

Size of larger estimate	Standard errors of estimates of monthly movements	Size of larger estimate	Standard errors of estimates of monthly movements
3,500	730	50,000	1,700
4,000	760	100,000	2,100
4,500	790	200,000	2,500
5,000	820	300,000	2,800
6,000	880	500,000	3,200
10,000	1,000	1,000,000	3,800
20,000	1,300		

The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents. Inaccuracies of this kind are referred to as the non-sampling error, and they may occur in any enumeration, whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers, and efficient operating procedures.

Related Publications

Users may also wish to refer to the following publications which are available on request:

Wage and salary earners	33.9	25.0	29.7	27.1	31.3
Other (d)	43.1	29.4	36.7	30.2	38.8

(a) Persons with jobs who did not work during survey week have been included in the calculation of average hours worked. When recording hours worked, fractions of an hour are disregarded. This procedure results in a slight lowering of the average hours figures. (b) Civilians aged 15 years and over. (c) Never married, widowed, and divorced. (d) Employers, self-employed, and unpaid family helpers.

Table 8 - Employed Persons (a) by Hours Worked (b), Queensland, May 1983
('000)

Hours worked		Number employed				
		Males	Married females	Other females (c)	All females	Persons
0 (d)	..	43.9	12.0	4.3	16.3	60.2
1-15	..	22.0	55.6	18.0	73.6	95.6
16-29	..	64.6	48.4	23.2	71.7	136.3

45-48	..	32.0	*	*	5.3	37.3
49 and over	..	92.3	17.4	6.1	23.6	115.9
<u>Total</u>	..	620.0	219.0	134.5	353.5	973.5

(a) Civilians aged 15 years and over. (b) Actual hours worked during survey week, not hours paid for. The figures may be affected by: public holidays, leave, and absenteeism; temporary absence from work due to sickness, accidents, and industrial disputes; and work stoppages due to bad weather, plant breakdown, etc. (c) Never married, widowed, and divorced. (d) Excluding persons stood down without pay for less than four weeks, including the whole of survey week, for reasons other than bad weather or plant breakdown; these persons are classified as unemployed.

Table 9 - Unemployed Persons and Unemployment Rates (a) by Occupation Group, Queensland

Occupation group (b)	February 1982		May 1982		August 1982		November 1982		February 1983		May 1983

<u>Total</u>	38.2	32.4	28.3	34.4	47.4	42.6
				weeks	weeks	weeks	weeks	weeks	weeks
Average (mean) duration of unemployment (b)				23.2	22.3	21.8	27.4	24.2	32.3
Median duration of unemployment (c)				7.8	10.9	8.6	15.3	10.0	16.9
Persons									
Number unemployed				'000	'000	'000	'000	'000	'000
Under 4 weeks	22.3	15.0	18.4	15.6	22.7	14.9
4 and under 8 weeks	12.8	11.6	14.4	12.3	22.4	16.1
8 and under 13 weeks	10.6	8.5	7.1	10.8	25.6	14.0
13 and under 26 weeks	9.9	13.4	8.5	17.8	22.4	25.7
26 weeks and over	17.8	16.5	19.2	24.5	31.0	41.9
<u>Total</u>	73.3	65.0	67.6	81.0	124.1	112.7
				weeks	weeks	weeks	weeks	weeks	weeks
Average (mean) duration of unemployment (b)				22.0	24.3	22.5	24.7	21.3	28.8
Median duration of unemployment (c)				8.8	11.4	8.7	14.3	11.3	18.7

(a) Period from the time the person began looking for work or was stood down, to the end of survey week.

(b) Periods of unemployment are recorded only in completed weeks; this procedure results in a slight lowering of the figures shown for average (mean) duration of unemployment.

(c) Median duration is calculated from group data, linear interpolation being used within the group which contains the median.

Table 12 - Unemployed Persons by Age, Queensland, May 1983

Age group (years)				Number unemployed			Unemployment rate (a)		
				Males	Females	Persons	Males	Females	Persons
				'000	'000	'000	%	%	%
15-19	12.5	12.8	25.3	18.5	20.1	19.3
20-24	15.6	9.3	24.8	15.8	12.0	14.1
25-34	18.6	11.0	29.6	10.0	11.3	10.4
35 and over	23.5	9.4	32.9	7.0	6.0	6.6
<u>Total</u>	70.1	42.6	112.7	10.2	10.7	10.4
Total 20 and over	57.6	29.8	87.4	9.3	9.0	9.2

(a) The number of unemployed in each group as a percentage of the labour force in the same group.

Explanatory Notes

The survey includes 341 persons aged 15 years and over except: (a) members of the permanent defence forces; (b) certain diplomatic personnel of overseas governments, customarily excluded from Census and otherwise designated as overseas visitors; (c) persons in Australia and their dependants who are not in Australia.

Classification of the Labour Force The labour force is classified according to the Eighth International Conference of Labor Statisticians, 1954. The labour force category to which a person is assigned depends on the actual

The Population Survey. The survey is based on a multi-stage area sample of private dwellings and non-private dwellings (hotels, clubs, etc.) and usually covers a fairly large area (usually one or more of the divisions of Queensland). Compared with the survey in February 1980 the population sample has been collected with the survey. Previously the survey was conducted in February, May, August and November. Information is obtained from the contents of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally carried out during a period of two weeks beginning on the Monday between the 5th and 20th of each month.
